

Advanced Document Management

Putting the right content in the right hands

Impartner Advanced Document Management module allows you to provide specific content to different types and tiers of partners, whether that's Platinum/Gold/Silver partners, or Reseller vs. Distributor.

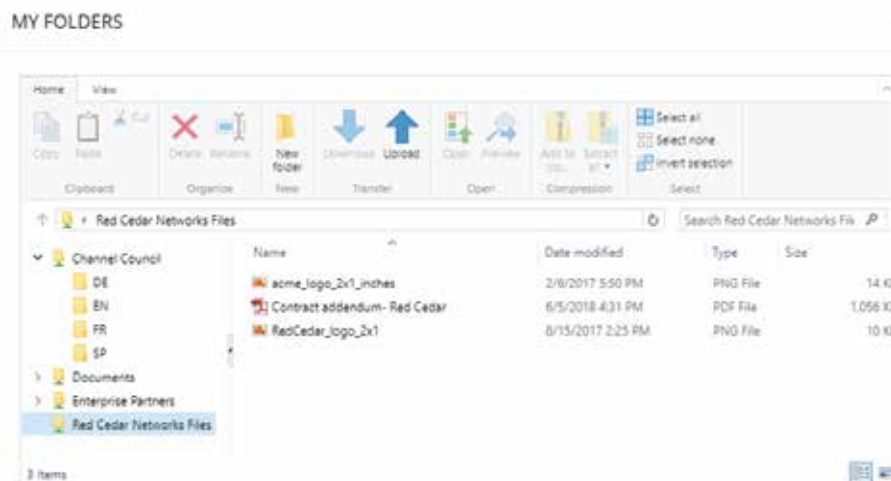

key features:

- The ability to organize content by document or layout type—thumbnail or full preview
- Fully search enabled, with search results limited to each partner segment
- Allow partners to upload files to folders you choose
- Auto generate dedicated folder per partner account

How it Works:

There are 2 main types of folders –permission-based folders and account specific ones. Partner user access permissions are set at each root folder, with the flexibility to add subfolder structure to better organize files within each root listed. Each account specific folder is auto generated by the tool every time a new partner account (company) is added to the PRM system. Partner users are also automatically granted visibility to their account folder.

For each folder made available to the users, you as the File Administrator may set the CRUD permission options on a user by user basis to allow upload, delete, or download only access.
