

Impartner PRM for Microsoft Dynamics 365

Deploy Impartner PRM with a native, real-time integration to your D365 instance

Impartner PRM for Microsoft Dynamics 365

Impartner PRM is available with an out-of-the-box integration with Dynamics 365 CRM that ensures a bi-directional, real-time sync of your partner data. Included with this product is a UI-based, self-service mapping tool to easily make modifications to your integration configuration. The mapping tool provides options for when accounts and contacts should be provisioned from PRM to CRM and vice versa, among other settings and filter options – including auto validation of your settings to protect your data integrity.

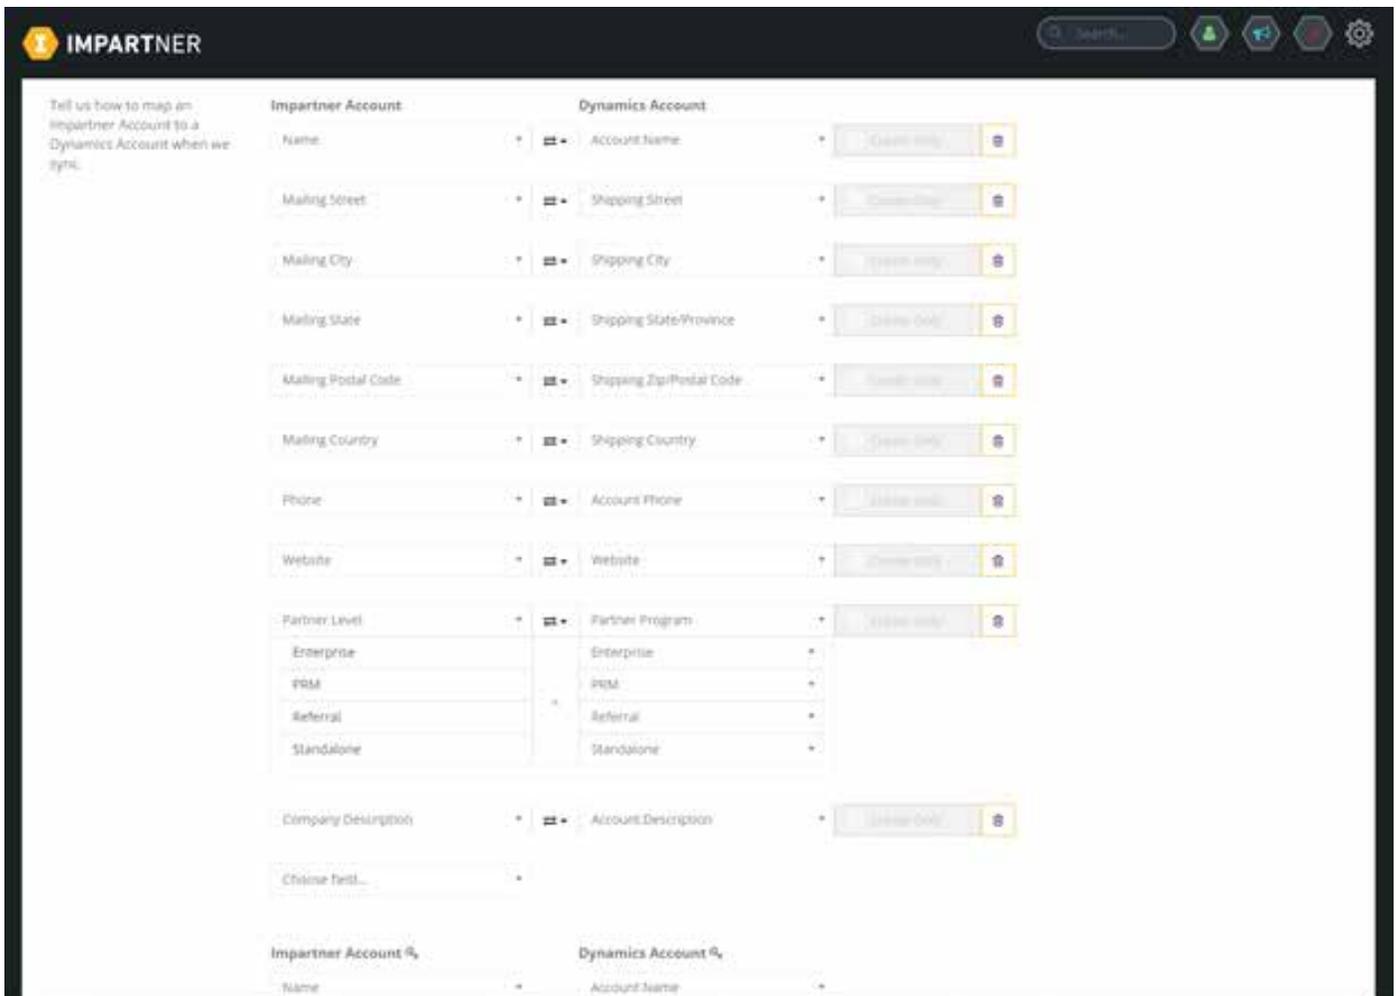

Key Features:

- Seamlessly integrate partner pipeline and more into your Dynamics 365 CRM
- Easily configure and manage your integration between CRM and PRM – including the ability to select sync directionality on a field by field basis
- Energize your partners with an easy-to-use interface, and a personalized partner experience
- Ensure your data is secure through Impartner's robust security protocols

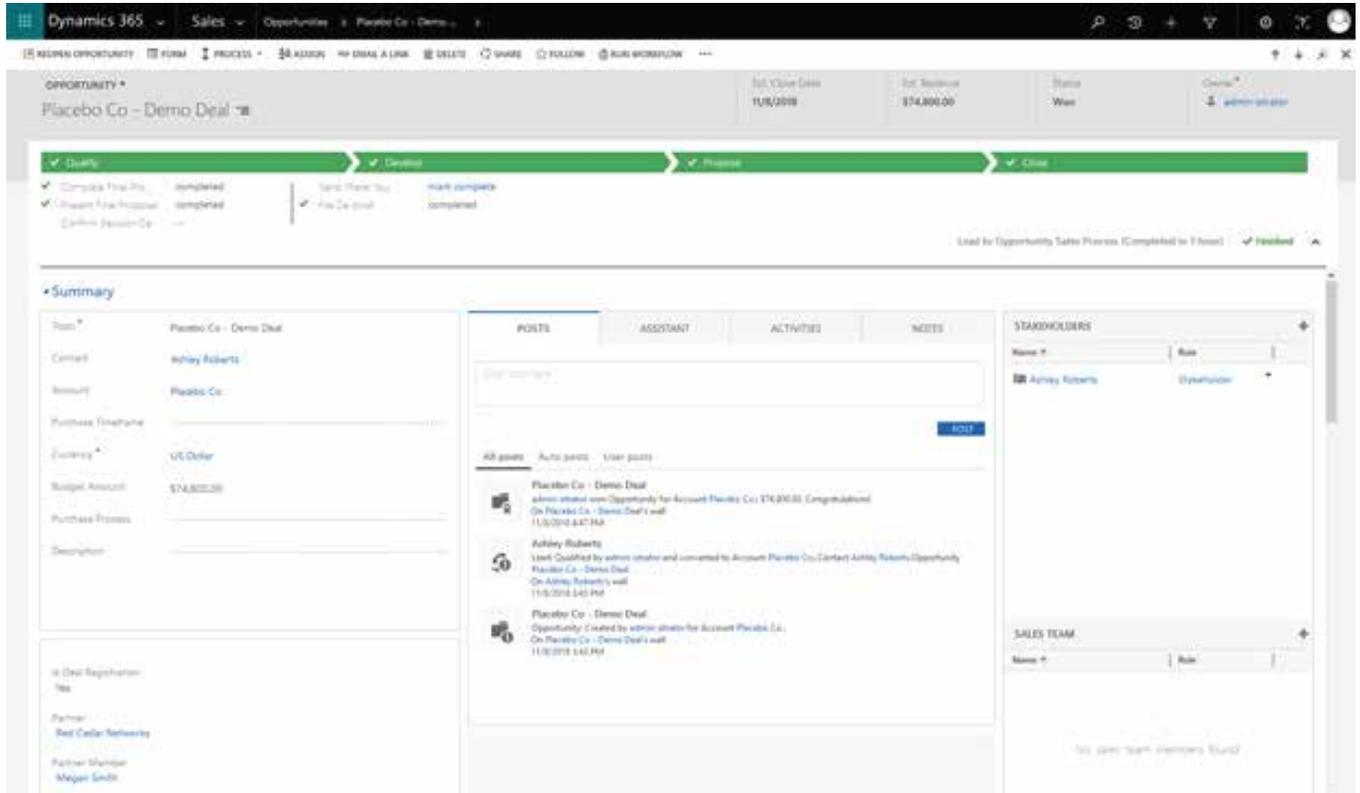

How it Works:

Using our managed solution, we connect your data directly from the partner portal to your Dynamics 365 instance – ensuring that only the right information is shown to the right partner. Data is always updated in real-time to keep your data integrity intact. In the end, the partners have a true window into your CRM from the portal and your channel managers don't need to leave Dynamics to manage their partners and view pipeline reports.

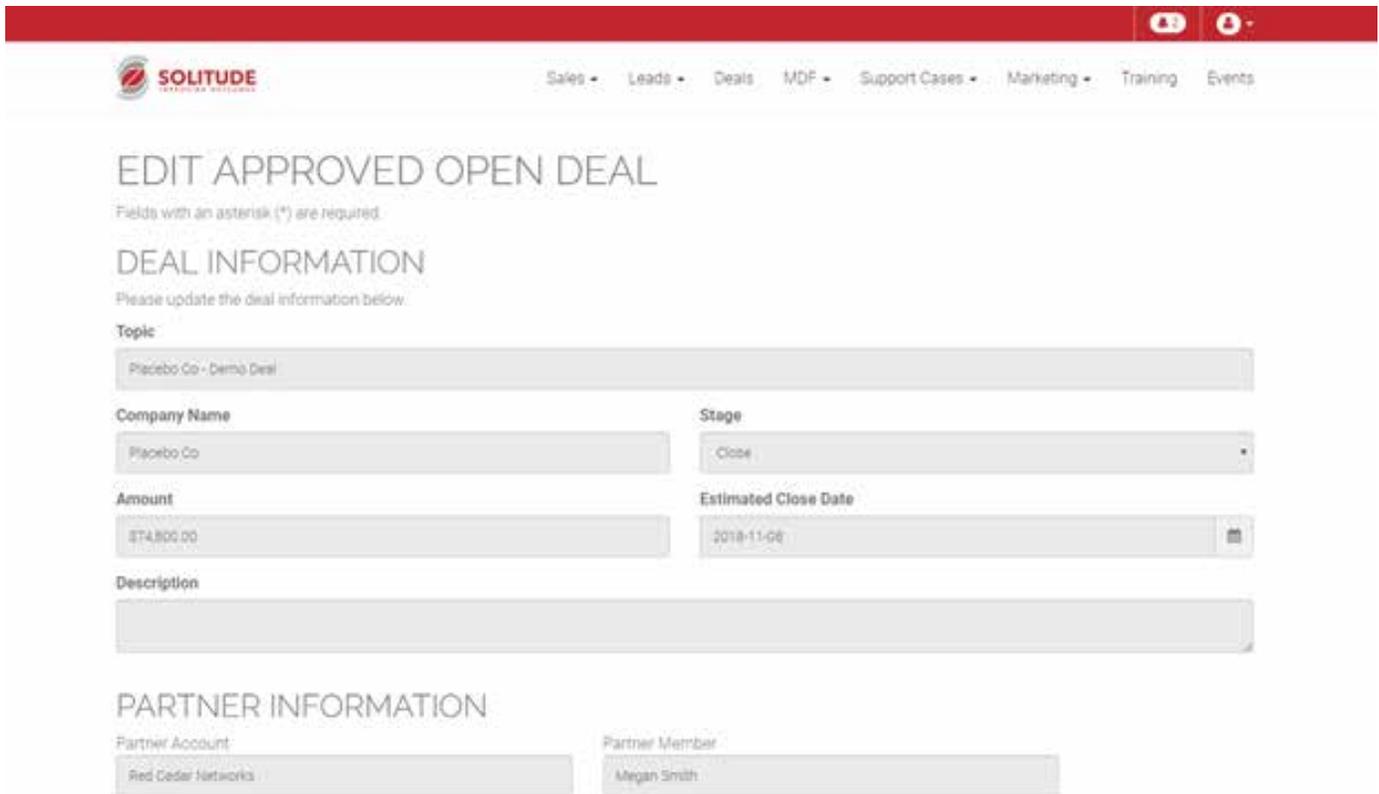

Field Mapping from PRM to CRM is Easy With our UI

Managed Solution Installs Easily Within Your Dynamics Instance

Lead and Opportunity Data from Dynamics 365 is Displayed in Portal in Real Time
